Quick guide:

Deploying Adminer on IBM i using Zend Server

Part of the PHP on IBM i series

Deploying Adminer on IBM i using Zend Server

Previously known by the 'catchy' title, phpMinAdmin, Adminer is a fully featured tool for managing content in your MySQL databases. A lightweight version of phpMyAdmin, Adminer provides a 'tidier user interface, better support for MySQL features, higher performance and more security.

- Log into an IBM i 5250 session

- Create a folder for the application
    - wrklnk '/www/zendsvr6/htdocs/*'
    - mkdir '/www/zendsvr6/htdocs/<your_folder>'
    - Take option 9=Work with Authority against the new folder
    - Grant user QTMHHTTP *RWX data and *ALL object authority

- Upload the source to the new folder
    - Use FileZilla to transfer the source file adminer-4.2.2.php

- Log into the Zend Server console

- Navigate to the Applications List

- Click on Define Application
    - Enter Base URL of http://<server_ip>:10080/<your_folder>/adminer-4.2.2.php
    - Enter an unique Application Name
    - Enter Version of 4.2.2
    - Click Define

- The Applications List will be displayed
    - The deployment status of your application will be displayed
    - Once the application is deployed, click on the application to show the application Details
    - Click on the Base URL to launch the application

- Log in using User root and Password

Partnering with some of the world's foremost software companies, Proximity develops, delivers, maintains and supports high performance solutions and applications for leading global companies in the logistics, manufacturing, retail and finance sectors.
