

Quick guide:

Deploying Joomla on IBM i using Zend Server

Part of the PHP on IBM i series

Deploying Joomla on IBM i using Zend Server

Another hugely popular open source content management system (CMS), Joomla has been downloaded over 50 millions times. As with WordPress and Drupal, Joomla has a whole host of extensions (over 7,000 in total) to increase functionality.

- Log into the Zend Server console
- Navigate to the Guide Page
- Click on the Joomla icon
- The Application Package Download dialog will be displayed
 - Once the package has downloaded, Click Next
- The Readme dialog will be displayed
- Click Next
- The Application Details dialog will be displayed
 - Enter an unique Display Name
 - Ensure the default server Virtual Host is specified, including the port number
 - Enter an unique Path
 - Click Next
- The End User License Agreement dialog will be displayed
 - Read the End User License Agreement, then check the checkbox
 - Click Next
- The Application Prerequisites dialog will be displayed
 - Check that all prerequisites are met
 - Click Next
- The User Parameters dialog will be displayed
 - Enter a Blog Name
 - Enter Database Password
 - Enter an unique Database Name
 - Enter a Joomla Admin Password
 - Click Next

- The Deployment Summary dialog will be displayed
 - Click Deploy
- The Applications List will be displayed
 - The deployment status of your application will be displayed
 - Once the application is deployed, click on the application to show the application Details
 - Click on the Base URL to launch the application
- To access the Joomla configuration functionality, click on Site Administrator
 - Log in with the Joomla Admin Username and Password
